

Spring Data JPA

Spring Data JPA is reduce the amount of boilerplate code which is required to implement the data access object (DAO) layer

Spring Data JPA uses internally Hibernate as a default JPA Provider.

There is Repository of Spring Data JPA this Repository impliments Entity manager of JPA and implimetnts all methods from it.

This repository get call internally entity manager and it will talk with database.

Spring Data JPA is a abstraction layer on the top of JPA.
