

What is an API?

Application Programming interface

It is collection functions and procedures which allows us to communicate between two applications or libraries

What is REST?

Representational State Transfer

It's an Architectural Style based on HTTP (Hypertext Transfer Protocol) for developing web-based applications.

It basically does provide several guidelines that which allows us to develop web service is known as RESTful Apis.

This guideline ensure that the request and resources are sent correctly and efficiently between client and server using standardized HTTP method.

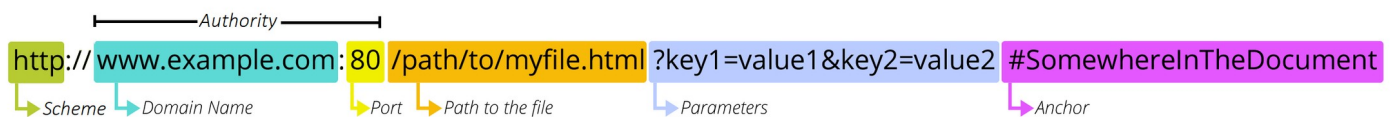

What is Restful API?

Difference between in Web application and Rest API?

Web application is something whenever it gets request web applications make sure that the end user (normal human not developer) will able to see it which human readable or something like HTML+CSS format.

Rest API is having a data in XML and JSON format which is for developers.

URL (Uniform Resource Locator)

Parts of a URL

URL : `https://www.example.co.uk:443/blog/article/search?docid=720&hl=en#dayone`
